1. Introduction

This guide explains how to use the ERP system in daily work. It covers selling at the counter, purchasing, stock, accounts, people, reports and system settings. It is written for owners, managers, cashiers, salesmen, accountants and warehouse staff.

You will only see the menus that your role allows. If a menu described here is missing for you, ask your administrator to enable it in **System → Permission Matrix** or **Module Settings**.

> **How to read this guide.** Menu and button names are written in bold exactly as they appear on screen, for example **Sales → POS Screen**. An arrow (→) means "open the menu, then choose the item".

1.1 What the system covers

Area	What you can do
Sales	POS counter sales, invoices, sale orders, delivery challans, sale returns, cashier shifts
Purchase	Purchases, purchase orders, goods received notes (GRN), purchase returns, monthly planner
Inventory	Products, stock and batches, warehouses, low-stock and aging reports
Production and supply chain	Production orders, stock transfers, suppliers, deliveries and tracking
Accounts and cash	Chart of accounts, journal entries, ledger, trial balance, balance sheet, profit and loss, main cash, closing
Expenses and loans	Expenses, claims, budgets, departments, projects, loans taken and given
People	Customers, vendors, employees, attendance, leave, payroll, installments, services
Shareholders	Investor accounts, deposits, withdrawals, shares, dividends, certificates, meetings
Reports and analytics	Sales, profit, receivables, payables, inventory, tax and comparison reports, BI and AI tools
Administration	Users, permissions, security, audit, backup, translations, support tickets

2. Getting started

2.1 Logging in and out

1. Open the system address in your browser and enter your **username** and **password**.
2. If Two-Factor Authentication is switched on for your account, enter the one-time code when asked.

3. To leave, open the profile menu at the top right and choose **Logout**. Always log out on shared computers.

To change your password, open the profile menu and choose **Change Password**.

2.2 The screen layout

- **Left sidebar** lists all modules (Sales, Purchase, Inventory, Accounts, People, Reports, System and more). Click a heading to open its sub-menu.
- **Top bar** holds the language selector, notifications, quick links and your profile menu.
- **Main area** shows the page you opened.
- **On a phone** the sidebar is hidden. Tap the menu button at the top to open it, and tap outside it to close it.

2.3 Language

Use the language selector in the top bar to change the interface language. Administrators can edit wording in **System → Translation Manager**.

2.4 Business mode and roles

The sidebar shows the business mode your company runs in: **Shop**, **Factory** or **Shop + Factory**. Modules that do not apply to your mode (for example Production in a pure shop) may be hidden.

The system recognises these roles: **Administrator, CEO, Owner, Manager, Accountant, Salesman, Warehouse and Staff**. Each role sees its own menus and quick links. For example, a Salesman sees New Sale and Sale Orders, while an Accountant sees accounts and reports. Administrators decide the details in the Permission Matrix.

2.5 Searching the menu

The sidebar has a search box. Type part of a menu name to jump to it. Recent and popular searches are shown for quick access.

3. Dashboards and analytics

- **Main Dashboard** shows today's sales, cash, stock alerts and shortcuts to common tasks.
- **Business Intelligence** (BI Dashboard, Dashboards, KPIs) lets you build charts and track key indicators. Use **Create Dashboard** and **Create KPI** to add your own.
- **Business Ratios** shows liquidity, profitability, efficiency, leverage and cash-flow ratios calculated from your accounts.
- **AI Diagnostics** gives insights, forecasts and reports generated from your data.

> **Note.** AI and forecast screens are guidance only. Check important figures against your normal reports before acting on them.

4. Sales

4.1 POS Screen (fast counter sale)

Open **Sales** → **POS Screen**. This screen is built for speed at the counter.

Before you start

1. Open a shift. If none is open, the screen asks you to **Open shift** and enter the opening cash.
2. Choose the **warehouse** to sell from using the dropdown at the top.

Adding items

- Click the search box (or press **F2**), then scan a barcode with a barcode scanner, or type a product name or code. Matching products appear as tiles below the box.
- Click a tile to add the product to the bill. Click it again to increase the quantity.
- **F3 / Scan Product Name** lets you point the camera at a product label to find it.
- If **Ask quantity** is switched on, a quantity box appears every time you add an item.
- In the bill on the right, change the quantity with the **+ / –** buttons or by typing. You can also edit the price of a line. Use the bin button to delete a line. **F7** edits the quantity of the last item.
- Items that are out of stock are shown faded and cannot be sold.

Customer

- The default customer is **Walk-in Customer**, who must pay the full bill.
- To sell on **credit**, click the customer button and pick a registered customer. Any unpaid amount is recorded as a balance due for that customer.

Discount and totals

Enter a discount in the discount box. The panel shows the subtotal, the discount and the large **TOTAL**.

Taking payment

1. Press **Pay** (or **F4**).
2. Enter the amount received for each payment method, for example cash or card. One bill can be split across several methods.
3. The dialog shows the **change** to hand back, or the **balance due** if a registered customer pays only part.
4. Press **Enter** or the complete button. A confirmation appears with the bill number and a **Print** button.

Hold and resume

Press **Hold** (**F8**) to park the current bill, for example when a customer goes to fetch something. Open **Held** (**F9**) to see parked bills and resume one.

Recent bills and void

Recent bills (**F6**) lists today's bills. From there you can reprint a receipt or open **Void bill** to cancel a bill. Voided receipts are marked VOID.

Cash in / out and closing the shift

- **Cash in/out** records money added to or taken from the drawer during the shift, with a reason.
- **Close shift** ends your shift. Count the drawer and enter the closing cash so that any difference can be reviewed by your manager.
- **Stock register** shows the stock movement of an item without leaving the POS.

Receipts

- **Auto print** prints a receipt automatically after each sale.
- **Receipt language** lets you choose an **English** or **Urdu** receipt. The choice is remembered on that device.
- Receipts are formatted for 80 mm thermal printers.

POS keyboard shortcuts

Key	Action
F2	Go to the search box
F3	Scan product name with the camera
F4	Pay
F6	Recent bills
F7	Edit quantity of the last item
F8	Hold the bill
F9	Held bills
Esc	Close the open dialog
Enter	Confirm payment or close the confirmation

> **Tip.** Keep the cursor in the search box between sales. A barcode scanner types into it automatically, so each scan adds an item without touching the mouse.

4.2 Cashier Shifts

Sales → Cashier Shifts lists every shift with its cashier, opening and closing cash and totals. Managers use it to review differences and closed shifts.

4.3 New Sale and Sales List

- **New Sale** creates a full invoice, for larger orders or account customers. Choose the customer, add products with quantity and price, apply discount and tax, then save.
- **Sales List** shows all sales. Open a sale to view it, print it or follow up its payment.

4.4 Sale Orders and Challans

- **New Sale Order / Sale Orders** record an order before delivery or payment. Convert the order to a sale when the goods are dispatched.
- **Challans** are delivery notes that travel with the goods.

4.5 Sale Returns

When a customer returns goods, use **Returns → New Sale Return**. Select the original sale, choose the items and quantities returned, and save. Stock and the customer's balance are updated.

5. Purchasing

- **New Purchase / Purchases** record goods bought from a supplier and increase stock.
- **New PO / Purchase Orders** send a formal order to a supplier and let you follow its status until delivery.
- **GRN (Receiving)** is the Goods Received Note. Record what actually arrived against the purchase order.
- **Purchase Returns** send goods back to a supplier and adjust stock and the amount payable.
- **Monthly Planner** helps plan the month's purchase needs.

6. Inventory

- **Products → Add Product** creates a product with name, code or barcode, category, brand, unit, cost and sale price.
- **Stock** shows the current quantity by product and warehouse. **Stock Batches** tracks batch-wise stock where it is used.
- **Warehouse** lets you add and manage storage locations.
- **Low Stock Alert** (under Reports) lists products at or below their minimum level so that you can reorder in time.
- **Inventory Aging** and **Stock Aging** show how long stock has been sitting unsold.

7. Production and supply chain

- **Production Orders** plan and record the making of finished goods from raw materials (Factory modes).
- **Transfer Orders** move stock between warehouses.
- **Production Report** summarises output and material use.
- **Supply Chain** covers suppliers, forecasts, deliveries and analytics.
- **Delivery & Tracking** offers a tracking panel for staff and **Customer Tracking** so that customers can follow their order.

8. Accounts and cash

8.1 Accounting

- **Accounts** is the chart of accounts (**All Accounts**, **Add Account**).
- **Entries** are journal entries (**All Entries**, **New Entry**). Most sales, purchases and payments post automatically. Use manual entries for adjustments.
- **General Ledger** shows the full history of an account.
- **Trial Balance**, **Balance Sheet** and **Profit & Loss** are the standard financial statements.
- **Periods** opens and closes accounting periods. A closed period cannot be changed, so close it only after review.
- **Export Reports** downloads statements.

8.2 Main Cash

- **Main Cash Dashboard** shows the cash position and recent movements.
- **Transactions**, **Cash Report**, **Cash Withdraw** and **Opening Balance** cover day-to-day cash handling.
- **AI Cash Intelligence** provides a cash forecast, collections, alerts and a business health score.

8.3 Daily and monthly closing

At the end of the day use **Reports** → **Daily Closing** to reconcile the day's sales and cash. At month end use **Monthly Closing**.

9. Expenses, budgets and loans

- **Expenses**: record expenses with **Add Expense**, organise them by **Categories** and handle staff **Claims**.
- **Budget**: create budgets and compare them with actual spending. Departments and Projects let you follow costs by team or job.
- **Loan Management**: loans taken, loan returns and **Loans Given** (money lent to others), with export to Excel or PDF.

10. People

10.1 Customers and vendors

- **Customers** → **Add Customer** stores name, phone, address, credit limit and opening balance. The customer's ledger shows sales, payments and the outstanding amount.
- **Vendors** → **Add Vendor** does the same for suppliers.
- **Payment Reminders** and **Installment Reminders** (WhatsApp) help you collect dues on time.

10.2 Installments

Create an **Installment Plan**, attach it to a sale and track every installment. Plan types are set up in **Manage Plans**.

10.3 HR Management

- **Employees** holds staff records.
- **Mark Attendance**, **Today's Attendance** and **Attendance Report** cover daily attendance.
- **Leave Requests / Request Leave** handle leave applications and approvals.
- **Payroll** processes salaries.

10.4 Services

For service businesses: **Services**, customer **Requests**, **Appointments** (with a calendar view), service inventory, technician performance and service reports.

11. Shareholders

The Shareholders module manages investors: their accounts, **deposit and withdrawal requests**, balances, shares and transfers, buy-back programs, discounts, **dividends** (including reinvestment), certificates and meetings. AI tools score investors and forecast dividends. Shareholders can also use their own portal to view balances and make requests.

12. Reports

Open **Reports** → **Reports Dashboard**. The main reports are:

Group	Reports
Sales	Summary, by hour, day or week, top products, best categories and brands, customer-wise, salesman performance
Profit	Profit analysis, profit trend, business health
Receivables and payables	Customer outstanding, receivable aging, payable aging
Inventory	Inventory status, low stock alert, inventory and stock aging
Tax	Sales tax summary, purchase tax summary
Returns	Sales return analysis, purchase return analysis
Comparisons and summaries	Daily, weekly, monthly, quarterly and yearly; yearly and monthly comparison
Custom	Date Range Report: choose any start and end date

Most reports can be printed or exported.

13. Documents, WhatsApp and other tools

- **Document Management** stores and finds files: dashboard, all documents and upload.
- **WhatsApp** sends payment and installment reminders to customers.
- **AI Board Room** gives role-based reports (CEO, CFO, COO and others) and meeting records.
- **Business Operations AI** offers task suggestions, plans, tasks, KPIs and a daily checklist.
- **Chatbot** answers questions about your business in plain language.
- **Testing** is a quality-assurance area for test projects, test cases and bug reports. It is mainly for the technical team.

14. System, security and administration

These menus are for administrators and owners.

- **User Management** adds users, assigns roles and resets access.
- **Permission Matrix** decides which role can see or do what.
- **Module Settings / Settings** switch modules on or off and hold company information such as name, address, phone and the receipt footer.
- **Security** has the dashboard, **Two-Factor Auth**, IP whitelist and blacklist, security logs and alerts, and API keys.
- **Audit** has audit plans, internal controls and audit trails that show who changed what.
- **Database Backup** creates and downloads backups. Take a backup regularly and before any major change.
- **Notifications, Admin Chat, Support Tickets, OTP Management** cover internal communication and help requests.
- **Manage Terms** and **Acceptance Status** record the terms users must accept.

15. A typical working day

When	Who	What to do
Morning	Manager	Check the Main Dashboard and **Low Stock Alert**. Review notifications.
Opening	Cashier	Open the POS and **Open shift** with the opening cash.
During the day	Cashier / Salesman	Sell on the POS or with **New Sale**. Hold bills when needed. Record **Cash in/out**.
During the day	Warehouse	Receive goods with **GRN**. Update transfers and returns.
Closing	Cashier	**Close shift**: count the drawer and enter the closing cash.
Evening	Accountant / Manager	Run **Daily Closing**, check receivables and take a backup.

When	Who	What to do
Weekly	Owner / Manager	Review profit, receivables, slow-moving stock and employee performance.

16. Good practices

1. Open a shift before selling and close it at the end of your turn.
2. Count the cash drawer at closing and note any difference.
3. Check **Low Stock Alert** every morning.
4. Run **Daily Closing** every day.
5. Use strong passwords, turn on Two-Factor Authentication and never share logins.
6. Back up the database on a schedule.
7. Review reports weekly: profit, receivables and slow-moving stock.

17. Troubleshooting

Problem	What to try
A menu is missing	Your role may not allow it. Ask the administrator to check the Permission Matrix.
Page looks old after an update	Refresh with Ctrl + F5 to clear the browser cache.
Barcode scan does nothing	Click the POS search box first, then scan. Check that the product has that barcode.
Cannot sell an item in POS	It may be out of stock in the selected warehouse. Check the warehouse dropdown.
Receipt does not print	Check the printer, allow pop-ups and printing in the browser, and press **Print** again.
Walk-in customer cannot leave a balance	Walk-in customers must pay in full. Choose a registered customer to sell on credit.
Forgot password	Ask the administrator to reset it, then change it after logging in.

18. Glossary

Term	Meaning
POS	Point of Sale, the fast counter selling screen
Shift	A cashier's working period with opening and closing cash
Walk-in customer	An unregistered customer who pays the full bill

Term	Meaning
Challan	A delivery note that goes with the goods
PO	Purchase Order, an order sent to a supplier
GRN	Goods Received Note, a record of goods that arrived
SKU / Barcode	The code that identifies a product
Ledger	The record of all entries of one account
Trial balance	A list of account balances used to check the books
Aging	A report that groups amounts or stock by how old they are
2FA	Two-Factor Authentication, an extra code at login

19. Getting help

Use **System → Support Tickets** to report a problem, or contact your system administrator. When you report an issue, include the page name, what you clicked and any message shown on the screen.
